Summary

I'm Mustapha Adegbite, a Frontend Developer skilled in React.js, Next.js, JavaScript (ES6+), and Tailwind CSS, focused on building fast and visually engaging web applications. I developed a Ticket Management App using React, Zustand, and Framer Motion, with Formik and Yup for smooth and precise form validation. I built a Real Estate Website with Next.js, Tailwind CSS, and React Query to deliver dynamic, high-performing listings. I also created a Todo App powered by React and a custom Toast Notification library for real-time feedback. Passionate about clean UI, maintainable architecture, and performance, I write scalable code that solves real-world problems with functionality and finesse.

Experience

Frontend Development Intern — Code Alpha

Sept 2025 – Oct 2025

- Gained practical experience in React and UI development through task-based internship.
- Built mini projects focusing on clean code, interactivity, and component-based structure.

Frontend Developer Intern — Creative Digital Tech (CDT)

Jan 2024 – Jun 2024

- Collaborated on building and improving web interfaces using React and Tailwind CSS.
- Implemented responsive designs and optimized user interactions across multiple projects.
- Worked with a small dev team, learning real-world workflows and Git collaboration.

Technical Skills

Programming	Tools	Soft Skills
HTML	GIT	Problem Solving
CSS	GitHub	Communication
JavaScript	Photoshop	Teamwork
TypeScript	Tailwind CSS	Leadership
React.js	Bootstrap	Creativity
Next.js		

Notable Projects

Invoice Generator App

A tool that allows users to quickly create, customize, and download professional invoices, saving time and reducing errors in manual billing.

Stacks: React.js + jspdf + Tailwind CSS

ClarityHub

ClarityHub is an AI-powered resource manager that lets users save links, organize them with tags, mark favorites, search using natural language, and get smart recommendations — all designed to reduce information overload.

Stacks: React.js + Tailwind CSS + Zustand + Framer Motion + Local Storage

Ticket Management App

Streamlines the process of creating, tracking, and resolving tickets, helping teams stay organized, prioritize tasks efficiently, and ensure no issue goes unresolved.

Stacks: React.js + Zustand + formik + Convex + Tailwind CSS

Habit XP

A web app that helps users build and maintain daily habits by tracking progress visually. Built with React and modern JavaScript, featuring a clean, responsive UI and intuitive interactions.

Stacks: React.js + Zustand + Tailwind CSS
